15.2 PURPOSE

The Personnel Management transactions set provides for the transmission of new or updated administration information about individual healthcare practitioners and supporting staff members. Since many systems (e.g., security, scheduling, orders, etc.), must be able to closely monitor changes in certain information regarding individual healthcare practitioners, the Personnel Management transaction set is used to clearly identify these events. For example, it is important to a Security System to be aware of when a staff member was hired or specific role has been terminated. Prior to Version 2.4, master file updates were the only method to update this information. However, when any of these changes are reported as master file update notifications, it is not obvious which of the data has been changed, and is cumbersome to process efficiently. It should be noted that Personnel Management functions that do not affect healthcare administration (e.g., benefits) are not addressed in this chapter.

Generally, information is entered into a Personnel Management system and passed to other systems requiring individual healthcare practitioner data either in the form of an unsolicited update or a response to a record-oriented query.

This document defines the transactions that occur at the application layer (the seventh level of the ISO-OSI models), that is, the abstract messages. The examples included in this chapter were constructed using the HL7 Encoding Rules, Trigger Events and Messages.

Each trigger event is documented below, along with the applicable form of the message exchange. The notation used to describe the sequence, optionality, and repetition of segments is described in Chapter 2, section 2.12, "Chapter Formats for Defining HL7 Messages."

The trigger events that follow are served by the unsolicited Personnel Management update (PMU) and General Acknowledgment (ACK) response.

The information that is included in any of these trigger event transactions can be more than the minimum necessary to communicate that event. Any of the fields occurring in the segments listed for the message can be used. A few or many fields can be used as agreed upon during implementation. However, please note, that when the contents of a field change for a field that is not necessarily related to the trigger event, it is a matter for implementation negotiation as to whether the receiving systems can capture this changed data.

15.2.1 Usage of Chapter 15 vs. Chapter 8

Chapter 8 deals with master file maintenance.

Chapter 15 manages operational relationships based on trigger events.

15.3 TRIGGER EVENTS AND MESSAGE DESCRIPTIONS

15.3.1 PMU/ACK – Add Personnel Record (Event B01)

An event B01 signals to add a new record for healthcare administration information about an individual healthcare practitioner establishing a relationship between that practitioner and the institution.

The EVN segment is used to indicate the effective or planned date.

15.4.6 PRA - Practitioner Detail Segment

The Technical Steward for the PRA segment is PA and Personnel Management.

The PRA segment adds detailed medical practitioner information to the personnel identified by the STF segment. A PRA segment may optionally follow an STF segment. A PRA segment must always have been preceded by a corresponding STF segment. The PRA segment may also be used for staff who work in healthcare who are not practitioners but need to be certified, e.g., "medical records staff."

15.4.6.12 PRA-12 Set ID - PRA (SI) 01616

Definition: For all messages except the Staff/Practitioner Master File Notification, this field is required and contains the number that identifies this transaction. For the first occurrence of the segment, the sequence number shall be one; for the second occurrence, the sequence number shall be two; etc. For the Staff/Practitioner Master File Notification message, this field should not be used.

15.4.7 ROL - Role Segment

Attention: This segment is retained for backwards compatibility as of v 2.7. The reader is referred to the *PRT segment described in Chapter 7*.

The role segment contains the data necessary to add, update, correct, and delete from the record persons involved, as well as their functional involvement with the activity being transmitted.

In general, the ROL segment is used to describe a person playing a particular role within the context of the message. In PM, for example, in the Grant Certificate/Permission message (B07), the ROL segment is used to describe the roles a person may perform pertinent to the certificate in the message.

The positional location of the ROL segment in ADT and Finance messages indicates the relationship. When the segment is used following the IN3 segment, and the role-ROL value is PP or FHCP, the PP or FHCP is related to the health plan. When the segment is used following the PID segment, and the role-

ROL value is PP or FHCP, the PP or FHCP is related to the person. When the segment is used following the PV2 segment, and the role-ROL value is PCP or FHCP, the PP or FHCP is related to the patient visit.

15.4.8 STF - Staff Identification Segment

The Technical Steward for the STF segment is PA and Personnel Management.

The STF segment can identify any personnel referenced by information systems. These can be providers, staff, system users, and referring agents. In a network environment, this segment can be used to define personnel to other applications, for example, order entry clerks, insurance verification clerks, admission clerks, as well as provider demographics. When using the STF and PRA segments in the Staff/Practitioner Master File message, *MFE-4-primary key value* is used to link all the segments pertaining to the same master file entry. Therefore, in the MFE segment, *MFE-4-primary key value* must be filled in. Other segments may follow the STF segment to provide data for a particular type of staff member. The PRA segment (practitioner) is one such. It may optionally follow the STF segment in order to add practitioner-specific data. Other segments may be defined as needed. When using the segments included in this chapter for other than Staff/Practitioner Master File messages, disregard references to *MFE-4 - primary key value*.

If less granular typing or categorization of the staff is required in addition to the specific type(s) found in this field, the reader is referred to [STF-39 Generic Resource Type or Category](#). Thus, while STF-4 may contain the code for a specific staff or practitioner type, STF-39 may contain "staff" or "practitioner". For further discussion of specific and generic types, the reader is referred to [STF-39 Generic Resource Type or Category](#).

Definition: This field describes the organization unit in the General Ledger to which the staff member is currently assigned. It is sometimes referred to as the "home" cost center because it is the organization unit to which the staff member's regular costs are accrued. Refer to [User-defined Table 0539 – Cost Center Code](#) in Chapter 2C, Code Tables, for valid values. This table contains no suggested values.

15.4.8.37 STF-37 Generic Classification Indicator (ID) 01892

Definition: This field describes whether or not this STF record represents an identifiable (i.e., real) human being or is a "placeholder" for one whose identity is not yet known. For example, work schedules may need to be created before the actual staff member has been hired, or appointments may be made with a floating resource who is not specifically known until the actual appointment date/time. Because these functions require a Staff Member ID code, it is important to distinguish whether or not the Staff Member is a real human resource or not. Refer to [HL7 Table 0136 - Yes/no Indicator](#) for valid values.

Y indicates that the staff member is an identifiable human being

N indicates that the staff member is not an identifiable human being

15.4.8.38 STF-38 Inactive Reason Code (CWE) 01893

Components: <Identifier (ST)> ^ <Text (ST)> ^ <Name of Coding System (ID)> ^ <Alternate Identifier (ST)> ^ <Alternate Text (ST)> ^ <Name of Alternate Coding System (ID)> ^ <Coding System Version ID (ST)> ^ <Alternate Coding System Version ID (ST)> ^ <Original Text (ST)> ^ <Second Alternate Identifier (ST)> ^ <Second Alternate Text (ST)> ^ <Name of Second Alternate Coding System (ID)> ^ <Second Alternate Coding System Version ID (ST)> ^ <Coding System OID (ST)> ^ <Value Set OID (ST)> ^ <Value Set Version ID (DTM)> ^ <Alternate Coding System OID (ST)> ^ <Alternate Value Set OID (ST)> ^ <Alternate Value Set Version ID (DTM)> ^ <Second Alternate Coding System OID (ST)> ^ <Second Alternate Value Set OID (ST)> ^ <Second Alternate Value Set Version ID (DTM)>

Definition: This field contains the reason that the staff member is inactive. Refer to [User-defined Table 0540 – Inactive Reason Code](#) in Chapter 2C, Code Tables, for suggested values. This table contains values for leave of absence, terminated, etc.

15.4.8.39 STF-39 Generic Resource Type or Category (CWE) 02184

Components: <Identifier (ST)> ^ <Text (ST)> ^ <Name of Coding System (ID)> ^ <Alternate Identifier (ST)> ^ <Alternate Text (ST)> ^ <Name of Alternate Coding System (ID)> ^ <Coding System Version ID (ST)> ^ <Alternate Coding System Version ID (ST)> ^ <Original Text (ST)> ^ <Second Alternate Identifier (ST)> ^ <Second Alternate Text (ST)> ^ <Name of Second Alternate Coding System (ID)> ^ <Second Alternate Coding System Version ID (ST)> ^ <Coding System OID (ST)> ^ <Value Set OID (ST)> ^ <Value Set Version ID (DTM)> ^ <Alternate Coding System OID (ST)> ^ <Alternate Value Set OID (ST)> ^ <Alternate Value Set Version ID (DTM)> ^ <Second Alternate Coding System OID (ST)> ^ <Second Alternate Value Set OID (ST)> ^ <Second Alternate Value Set Version ID (DTM)>

Definition: This field transmits a code that represents a high level categorization of resources. This is a companion field for the [STF-4 Staff Type](#) and allows an institution or enterprise to impose a one or more super category levels. Refer to [User-defined Table 0771 – Resource Type or Category](#) in Chapter 2C, Code Tables, for suggested values. This table contains no suggested values.

An enterprise might have more than one method to categorize or type resources at a high level. Therefore, this field can repeat.

Example: An organization may define discreet staff types (e.g., Pediatric Oncologist, Gerontologist, Oncology Pharmacist, Pediatric Pharmacist, Critical Care Nurse, Nurse Case Manager – Cardiology) as well as broad categories (e.g., Physician, Pharmacist, Nurse, Pediatric, Oncology, Cardiology, Case Management, Nephrology). Employing STF-4 for the discreet terms and STF-39 for the more generic terms allows both the levels of granularity to be apply to the staff without confusing the specific types with generic types. Thus, one may see:

STF-4	STF-39
• Custodian	• Staff
• Non-clinical Nursing Supervisor	• Manager
• Pediatric Oncologist	• Physician ~ Pediatrics ~ Oncology
• Gerontologist	• Physician
• Oncology Pharmacist	• Pharmacist ~ Oncology
• Pediatric Pharmacist	• Pediatrics ~ Pharmacist
• Critical Care Nurse	• Nurse
• Nurse Case Manager – Cardiology	• Nurse ~ Cardiology ~ Case Management

15.4.8.40 STF-40 Religion (CWE) 00120

Components: <Identifier (ST)> ^ <Text (ST)> ^ <Name of Coding System (ID)> ^ <Alternate Identifier (ST)> ^ <Alternate Text (ST)> ^ <Name of Alternate Coding System (ID)> ^ <Coding System Version ID (ST)> ^ <Alternate Coding System Version ID (ST)> ^ <Original Text (ST)> ^ <Second Alternate Identifier (ST)> ^ <Second Alternate Text (ST)> ^ <Name of Second Alternate Coding System (ID)> ^ <Second Alternate Coding System Version ID (ST)> ^ <Coding System OID (ST)> ^ <Value Set OID (ST)> ^ <Value Set Version ID (DTM)> ^ <Alternate Coding System OID (ST)> ^ <Alternate Value Set OID (ST)> ^ <Alternate Value Set Version ID (DTM)> ^ <Second Alternate Coding System OID (ST)> ^ <Second Alternate Value Set OID (ST)> ^ <Second Alternate Value Set Version ID (DTM)>

Definition: This field contains the staff member's religion. Refer to [User-defined Table 0006 - Religion](#) in Chapter 2C, Code Tables, for suggested values.

15.4.8.41 STF-41 Signature (ED) 01861

Components: <Source Application (HD)> ^ <Type of Data (ID)> ^ <Data Subtype (ID)> ^ <Encoding (ID)> ^ <Data (TX)>

Subcomponents for Source Application (HD): <Namespace ID (IS)> & <Universal ID (ST)> & <Universal ID Type (ID)>

Definition: Digital Signature of the staff member. The Digital Signature includes a seal concept and is verifiable.
